Claims

and the second s
 A gas purification system comprising:
a reactor having a reactor volume and a reactor wall, the reactor wall
having an interior side and an exterior side, and defining a communicating
portal therebetween for a mixed gas flow;
a heat conduit within the reactor volume having a conduit wall, the
conduit wall having an interior side and an exterior side, and defining a channel
therethrough for passing a heated material through the reactor volume;
a reaction catalyst coating in contact with the exterior side of the
conduit wall;
a gas selective membrane within the reactor volume disposed between
the reactor wall and the conduit wall, said gas membrane in contact with the
mixed gas flow and selectively passing a constituent gas of the mixed gas flow
therethrough, such that a raffinate of the mixed gas flow is retained in contact
with said membrane;
an outlet channel for removing said raffinate from contact with said
selective membrane; and
a passageway for the removal of the constituent gas from the interior of
said reactor.

REB-12403/01 20227jks/gs

- The gas purification system of claim 1 further comprising a
 combustion catalyst in contact with the interior side of said conduit wall.
- The gas purification system of claim 1 wherein a gap space
 exists between said reaction catalyst coating and said membrane.
- The gas purification system of claim 3 wherein the gap space
 ranges from 0.05 inch to 1.0 inch.
 - The gas purification system of claim 3 wherein the space comprises a laminar flow disruptor.
 - The gas purification system of claim 6 wherein the flow disruptor is selected from the group consisting of: packing, particulate, mesh wire, wool, granule, pellet and fluidized catalyst.
 - 8. The gas purification system of claim 1 further comprising a heat transfer element in thermal contact with at least one object selected from the group consisting of: said heat conduit and said membrane.
- The gas purification system of claim 8 wherein the heat transfer
 element is a fin.

REB-12403/01 20227jks/gs

- The gas purification system of claim 9 wherein the fin is coated
 with a reaction catalyst.
- 1 11. The gas purification system of claim 10 wherein the fin has a 2 gas communication aperture therethrough.
 - The gas purification system of claim 1 further comprising a combustion catalyst on an exterior wall of a feed tube.
 - 13. The gas purification system of claim 1 further comprising a flow disruptor with said reactor selected from the group consisting of: a dimple, a protrusion, packing, mesh wire, wool, granulate, pellet catalyst, fluidized catalyst, a baffle and a curved membrane.
- 14. The gas purification system of claim 20 wherein said heater has
 2 flowing therein a sweep gas.
- 1 15. The gas purification system of claim 1 further comprising feed
 2 liquid compression means to convey the mixed gas flow through the portal into
 3 said reactor.
- 1 16. The gas purification system of claim 1 further comprising a
 2 plurality of said membrane.

said reactor.

REB-12403/01 20227jks/gs

1	17. The gas purification system of claim 1 wherein the membrane is
2	hydrogen selective and the constituent gas is hydrogen.
1	18. The gas purification system of claim 1 wherein the catalyst
2	coating comprises a methanol reforming catalyst.
1	19. The gas purification system of claim 1 wherein the catalyst
2	coating comprises an ammonia cracking catalyst.
1	20. A gas purification system comprising:
2	a reactor operating above room temperature having a reactor volume
3	and a reactor wall, the reactor wall having an interior side and an exterior side,
4	and defining a communicating portal therebetween for a mixed gas flow;
5	a gas selective membrane within the reactor volume, said gas
6	membrane in contact with the mixed gas flow and selectively passing a
7	constituent gas of the mixed gas flow therethrough, such that a raffinate of the
8	mixed gas flow is retained in contact with said membrane;
9	an outlet channel for removing said raffinate from contact with said
10	selective membrane;
11	a raffinate compressor disposed in fluid communication with said outlet
12	channel; and

a passageway for the removal of the constituent gas from the interior of

5

REB-12403/01 20227jks/gs

- The gas purification system of claim 20 wherein the raffinate
 compressor is a venturi.
- 1 22. The gas purification system of claim 20 further comprising a 2 fuel cell powered by the constituent gas.
 - The gas purification system of claim 20 wherein the passageway is brazed to the feed conduit.
 - A gas purification system comprising:
 - a gas selective membrane within the reactor volume, said gas membrane in contact with the mixed gas flow and selectively passing a constituent gas of the mixed gas flow therethrough, whereby a raffinate of the mixed gas flow is retained in contact with said membrane;
- an outlet channel for removing said raffinate from contact with said selective membrane; and
- a passageway for the removal of the constituent gas from the interior of
 said reactor.
- 1 25. The gas purification system of claim 20 having at least one
 2 component coupled thereto, said component being selected from a group
 3 consisting of: a raffinate burner, a mixed gas flow feed pump, a raffinate back
 4 pressure controller, and an oxygen sensor.

	, ,
1	26. A gas purification system comprising:
2	a reactor operating above room temperature having a reactor volume
3	and a reactor wall, the reactor wall having an interior side and an exterior side,
4	and defining a communicating portal therebetween for a mixed gas flow;
5	a first reaction catalyst and a second reaction catalyst within said
6	reactor volume;
7	a gas selective membrane within the reactor volume, said gas
8	membrane in contact with the mixed gas flow and selectively passing a
9	constituent gas of the mixed gas flow therethrough, such that a raffinate of the
10	mixed gas flow is retained in contact with said membrane;
11	an outlet channel for removing said raffinate from contact with said
12	selective membrane; and
13	a passageway for the removal of the constituent gas from the interior of
14	said reactor.
1	27. The gas purification system of claim 26 wherein the first
2	catalyst is a high temperature catalyst and the second catalyst is a low

28. The gas purification system of claim 26 wherein the first and second catalysts are differentially distributed along a temperature gradient within said reactor.
